Since different light source has different radiant energy, they will show different colors when they irradiate objects. In the color management of industrial production, although the inspectors have carefully compared the colours of the goods, the judgement of the colour difference of the goods is inaccurate because the ambient light source is not standard or inconsistent with the light source used by the merchants. Customers will complain or even return the goods when they check the chromatic aberration of the goods exceeding the standard range, which can seriously affects the goodwill of the company.

Application

It can be applied to the industries that need to perform color difference testing as follows: as the premiere designer and manufacturer of color matching instrument products for the Graphic arts, Photographic, Textile, Dyeing, Packaging, Printing, Leather, Inks, Knitwear, Plastic, Automotive and Ceramics industries.
